
Relational database
Tables, keys and source clocks
Task contract
Root, horizon, labels and masked requests
Source time < query cutoff; phase and label-availability checks
1. Choose a feature program (S1)
Schema-derived programs
Depth 1-4; bounded repeats
Families, CDF, annotations
GraphReduce
Filter, annotate, reduce, join
Entity-level feature frame
Pluggable learner
CatBoost: evaluated reference
TFMs via compatible adapters
Validation-driven promotion
10K screening → 50K confirmation → full-source rerank
2. Graph check (S2)
At most 1 smaller finalist
Production fit / refit
3. Training policy (S3)
Same graph; choose support
Recent / pooled / blends
4. Optional challengers (S4)
Text, ensembles and readouts
Same S3 control; shared gate
Freeze and refit
Plan + schema + policy + learner
Keyed predictions
Entity / cutoff order
